

REPLACE\$ Function (VB work-a-like)

Returns a string in which all occurrences of one specified substring have been replaced with another.

Syntax:

```
Replace$(expression, find, replacewith)
```

Example:

```
fred$=Replace$(Date$,"/","-") 'replaces all / in the date with -
```

Code:

```
Function Replace$(a$,b$,c$)
    Local Integer z,d,e
    Local r$,x$
    z=1:d=Len(c$):e=Len(b$):r$=a$
    Do
        z=Instr(z,r$,b$)
        If z=0 Then Exit Do
        x$=Left$(r$,z-1)
        r$=x$+c$+Mid$(r$,z+e)
        z=Len(x$)+d
    Loop
    Replace$=r$
End Function
```
